

CERTIFICATE OF COMPLIANCE – Statement on Ozone-Depleting Substances –

The Montreal Protocol on Substances that Deplete the Ozone Layer stands as a pivotal global agreement dedicated to protecting the stratospheric ozone layer. Through its comprehensive framework, the protocol mandates the progressive reduction and ultimate elimination of ozone-depleting substances (ODSs). Complementing this critical international effort, the European Union has implemented Regulation (EU) 2024/590, which provides rigorous oversight of ODSs.

Nexperia B.V. affirms its strong commitment to environmental stewardship and compliance with regulations on ODSs. Our products do not contain intentionally added ODSs. Regarding auxiliary chemicals, two substances used for cooling in closed systems have been identified, with minimal potential for emissions. Nexperia is actively working to implement safer alternatives for these two ODSs, demonstrating our ongoing dedication to minimizing environmental impact and ensuring our operations align with both regulatory requirements and sustainability objectives.

The undersigned certifies that, to the best of our knowledge, the statements provided above are accurate and valid. Nexperia has established rigorous systems to ensure that its products meet global environmental regulations and standards. However, it is important to note that not all materials used in Nexperia's products have undergone independent verification for substance content. Should any discrepancies or issues arise from the information contained in this document, Nexperia's standard terms and conditions of sale will prevail, except in cases where alternative agreements have been explicitly made in writing by both parties. Nexperia cannot guarantee that end products created by our customers, which incorporate Nexperia components, will consequently comply with the assertions made in this statement.
